

CL-2001 Data Structures Lab # 10

Objectives:

- Binary Search Tree BST
- Insertion in BST
- Deletion in BST
- Searching in BST
- Traversal (in-order, post-order, pre-order)

Note: Carefully read the following instructions (*Each instruction contains a weightage*)

1. There must be a block of comments at start of every question's code by students; the block should contain brief description about functionality of code.
2. Comment on every function and about its functionality.
3. Mention comments where necessary such as comments with variables, loop, classes etc to increase code understandability.
4. Use understandable name of variables.
5. Proper indentation of code is essential.
6. Write a code in C++ language.
7. Make a Microsoft Word file and paste all of your C++ code with all possible screenshots of every task **outputs in Microsoft Word and submit word file.**
8. First think about statement problems and then write/draw your logic on copy.
9. After copy pencil work, code the problem statement on MS Studio C++ compiler.
10. At the end when you done your tasks, attached C++ created files in MS word file and make your submission on Google Classroom. (Make sure your submission is completed).
11. Please submit your file in this format **19F1234_L8.**
12. Do not submit your assignment after deadline. Late and email submission is not accepted.
13. Do not copy code from any source otherwise you will be penalized with negative marks.
14. Submit .cpp files of all tasks

Problem: 1 |

Write a function to delete a specific node in BST.

Problem: 2 |

Write a Function to find the number of nodes at a specific height (given by user).

Problem: 3 |

Write a C++ code to find the largest and smallest values in BST.

Problem: 4 |

Implement pre-order and post-order traversals using iterative method

Problem: 5 |

Write a function to determine whether the Binary Tree is BST or not.

😊 Best of luck
